SUMMARY

I'm a UX/UI designer with deep experience leading large, complex digital transformations across global enterprise platforms. At PepsiCo, I've owned the redesign of mission-critical systems like the ServiceNow Fulfillers platform and the global myPepsiCo intranet, improving navigation, reducing training time, and creating clearer, more intuitive experiences for thousands of employees. My work combines research, workflow analysis, information architecture, and cross-platform design to simplify complexity and make products easier to use. I collaborate closely with engineering and stakeholders, drive alignment through clear communication, and focus on building scalable, accessible solutions that actually improve people's day-to-day work.

WORK EXPERIENCE

01/2023 - Present

ESM Sr. UX/UI Designer, PepsiCo Remote

- Owning the strategic redesign of the Fulfillers platform in ServiceNow, a mission-critical system that supports all internal service request operations at PepsiCo. The initiative aims to reduce training time, increase task efficiency, and eliminate friction for both new and experienced Fulfillers.
- Leading a multidisciplinary design team and orchestrating a research-driven roadmap that includes discovery, workflow analysis, IA restructuring, prototyping, stakeholder alignment, and iterative validation.
- UX overhaul of PepsiCo's global intranet (myPepsiCo), a large scale transformation impacting the entire employee population worldwide. While simultaneously building a comprehensive Design System to ensure long term scalability and design consistency.
- Drove major improvements in navigation and findability by leading user research efforts. Conducted Card Sorting exercises to redefine the mega menu taxonomy, reducing the average click path to high value information from 14+ clicks to just 6.
- Designed and delivered a fully cross platform experience web, iOS, and Android, from the ground up. Ensured alignment across all platforms through rigorous prototyping in Figma, accelerating stakeholder approval and validation.
- Acted as the dedicated design owner within an Agile environment, writing and refining detailed User Stories in Azure DevOps (ADO) to translate design intent into clear, actionable requirements for engineering teams.

- Bridged the gap between design and development by demonstrating technical feasibility through live HTML and browser developer tools adjustments, ensuring implementation remained faithful to Figma specifications. Ensured full alignment with ServiceNow standards to optimize development efficiency.
- Established accessibility best practices across all digital touchpoints, significantly improving the experience for employees with disabilities.
- Enhanced the content ecosystem by developing standardized guidelines for content owners across all intranet microsites, driving consistency and relevance at scale. Supported personalized experiences so employees only receive content specific to their geographic location (e.g., Mexico specific content for employees in that region).

11/2022 - 01/2023

Sr. UX/UI Designer, UNIMEX Financiera Remote

- Conducted usability tests and collaborated with development teams to improve user experience.
- Ensured accessibility compliance and optimized content strategy.
- Monitored performance metrics to track the success of design changes.
- Developed and implemented A/B testing strategies that improved user interface performance.
- Regularly presented design concepts and findings to senior stakeholders, securing buy-in and ensuring alignment with organizational objectives.
- Collaborated with content creators to develop a unified content strategy, improving user comprehension and engagement on key pages.
- Designed and implemented an intuitive chatbot that allowed users to answer their questions independently without needing to interact with an agent. This solution significantly reduced the workload for the customer support team and improved user satisfaction by providing quick and easy access to information.

01/2022 - 06/2022

UX/UI Designer, CULTURATE Remote

- Led a team of designers to create an interactive prototype for a mobile app, refining the user experience based on feedback.
- Conducted comprehensive user research, including interviews and surveys, to develop detailed user personas and understand the needs of the target audience.
- Created interactive prototypes using Figma, which were tested and iterated based on user feedback.

- Designed the app's visual identity, including the selection of color schemes, typography, and iconography, ensuring that the final product was both aesthetically pleasing and consistent with the CULTURATE brand.

01/2021 - 06/2021 **Product Designer, State Government Chamizal Park** Remote

- Redesign of various infrastructure elements in Chamizal Park, Cd. Juárez, México, as part of a collaboration with the state government. This project involved the redesign and remodeling of park amenities, including benches, swings, workout areas, and a dog park, with the goal of enhancing both functionality and aesthetics across the park.
- Contributed to the design and development of common areas, such as bike parking and campfire areas, ensuring seamless integration with the park's overall layout and theme. This work focused on creating engaging, accessible spaces for visitors.
- Collaborated closely with the lead architect, state government, and civil engineers to ensure alignment with project objectives and the successful execution of the remodeling plan.
- Developed detailed 3D visualizations and prototypes using SolidWorks, a 3D modeling software, and rendered designs in Keyshot to create realistic representations of proposed infrastructure changes, facilitating clear communication and stakeholder approval.

By actively contributing to the project, I helped improve the park's amenities and create functional, visually appealing spaces for the community to enjoy.

SKILLS

- **Figma**
- **Figjam**
- **Adobe XD**
- **Adobe Illustrator**
- **Adobe Photoshop**
- **Optimal workshop**
- **Notion**
- **Miro**
- **Trello**
- **Wireframing**
- **Prototyping**
- **User Research**
- **A/B Testing**
- **Information Architecture**
- HTML5
- CSS3
- Git
- WordPress
- Wix
- ServiceNow
- Google Analytics
- Bootstrap
- GitHub
- Bitbucket
- Azure
- User Personas
- Accessibility Design

EDUCATION

Universidad Internacional de la Rioja (UNIR),
Master's Degree in User Experience Design

Universidad Autónoma de Ciudad Juárez
(UACJ), Bachelor's degree in Industrial Design

LANGUAGES

Spanish (native)

English (C1)

CERTIFICATES

Learn HTML Course
Codecademy

Build a Website with HTML, CSS, and GitHub
Codecademy

Certified SAFe 6 Practitioner

UX Design Certification
